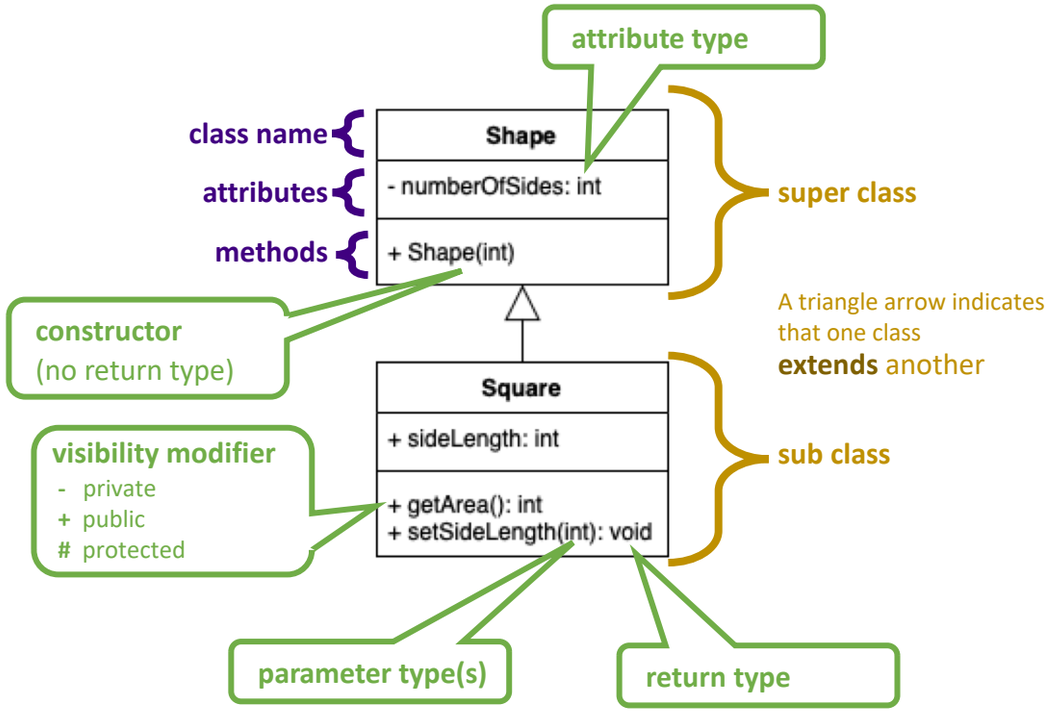
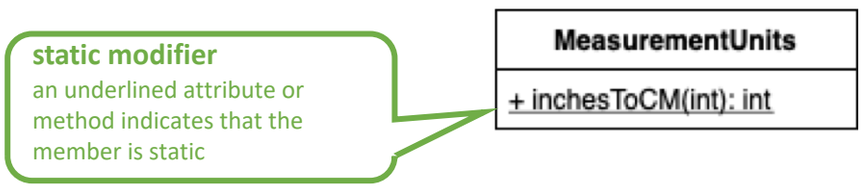
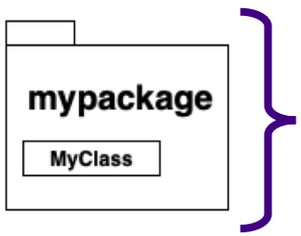
COMP 16412: UML Syntax Quick Reference Sheet







A box with a tab in the top-left corner indicates a Java **package**. Classes inside the box are part of the package.

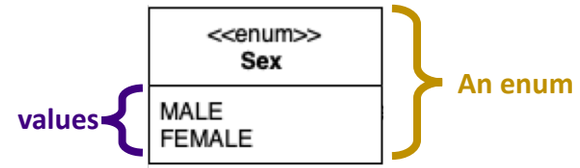
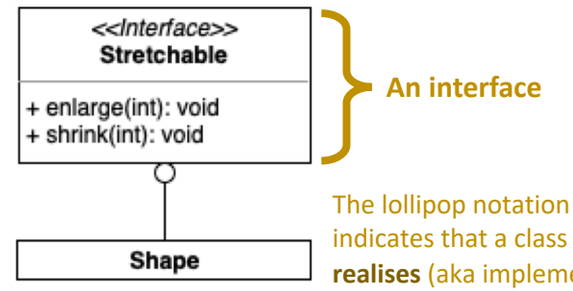
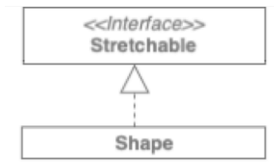
Other Reference Types:







The lollipop notation indicates that a class **realises** (aka implements) an interface

(...or the dashed arrow)

Relationships:

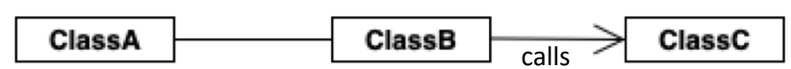
A diamond headed line represents a **whole-part** relationship

open = aggregation
(the part exists without the whole)

shaded = composition
(the part cannot exist without the whole)

A cross inside a circle indicates a **nested** class (or nested enum / interface)

You can use a straight line connector to indicate **association** (e.g. in this case, ClassA and ClassB might call each other), or a **directional** arrow if that association is one way (e.g. ClassB calls ClassC, but ClassC does not ClassB). You can also label any line to describe the relationship in more depth.



You can label lines using numbers to describe cardinality.

Some common cardinality options...

0...1 Zero or one.
1...* At least one.
***** Zero or more.
